

Website Impact Analysis

A Revenue Projection Prepared for the Owner of an East Village Deli, Manhattan

The following analysis is provided to support your decision regarding the proposed website project. All figures presented below have been deliberately reduced to half of standard industry estimates in order to remain conservative and to ensure that any projection meets or exceeds expectations.

1. Recovering Losses from Third-Party Delivery App Fees

Platforms such as DoorDash, Uber Eats, and Grubhub currently charge a commission of approximately 25–30% per order. By implementing a direct ordering system through your own website, a portion of your existing customer base will shift to ordering directly, allowing you to recover commission fees that are currently being lost.

 - Estimated monthly recovery: **\$250 – \$300**
 - Estimated annual recovery: **\$3,000 – \$3,600**
2. Capturing New Catering and Bulk Order Revenue

The East Village neighborhood contains a significant number of offices, NYU-affiliated facilities, production studios, and event venues. Without a dedicated catering page, your business is currently unable to capture this demand, which represents a meaningful and untapped revenue stream.

 - Estimated monthly addition: **\$400 – \$2,400**
 - Estimated annual addition: **\$4,800 – \$28,800**
3. New Customer Acquisition Through Local Search (SEO)

A Google Business listing alone provides limited visibility for high-intent search terms such as "best deli East Village" or "breakfast Avenue A." A properly built website with local SEO optimization captures these searches and converts them into walk-in traffic and pickup orders.

 - Estimated monthly addition: **\$110 – \$500**
 - Estimated annual addition: **\$1,350 – \$6,000**
4. Preventing Customer Loss Due to Perceived Credibility Issues

For an established business of over ten years, the absence of a website may suggest to prospective customers that the establishment is closed or no longer operating reliably. This perception is particularly damaging among younger demographics who routinely verify businesses online before visiting.

 - Estimated annual loss prevention: **approximately \$2,700**

Projected Revenue Impact (Conservative Estimates)		
Scenario	Additional Monthly Revenue	Additional Annual Revenue
Conservative	\$760	\$9,150
Realistic	\$1,700	\$20,400
Strong	\$3,200	\$38,400

Even in the event that all of the above projections are overstated and actual results reach only half of the conservative scenario, additional annual revenue of approximately \$4,500 or more remains attainable. A website is an asset that recovers its initial investment within a short period and continues to generate returns for many years thereafter. I respectfully ask for your careful consideration.
